NOTICE OF ALLOWANCE

Page 2

Election/Restrictions

1. Claim 43 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 45 and 48-50, directed to the species of Figures 5 and 8 are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

- 2. Claims 43-45 and 47-50 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: In light of Applicants arguments in the Appeal Brief filed on 06/14/2004, in combination with the claimed limitations reciting means plus function, it appears that the prior art of record fails to teach or render obvious, a tube for implantation into the eye for replacement conduction of aqueous humor from the chambers of the eyeball to the subconjunctival tissue and ultimately the venous system, comprising, *inter alia*, the combination of an elongated fluid conducting conduit having a sidewall, an interior passageway and at least one longitudinally extending opening in the sidewall that exposes the interior passageway, and at least one nidi-forming means comprising, *inter alia*, structural elements 32(a), 38, 132(a), and 138 serving the function of forming a focal point, nest, or nidus, carried by the conduit and extending laterally therefrom, for implementing the formation of at least one aqueous filtration bleb in the tissue of the eyeball.
